

# Assignment 1 : Register form

## Overview

In this assignment, you will create a registration form using Angular. The form should include fields for name, email, phone number, password, confirm password and a save button. Each field should be mandatory and include specific validation rules.

## Form details

- **Name:** Required, must be at least 3 characters long and have no numbers.
- **Email:** Required, must be a valid email format.
- **Phone Number:** Required, must be a number.
- **Password:** Required, must be at least 8 characters long and contain at least one uppercase letter, one lowercase letter, and one number.
- **Confirm Password:** Required, must match the password field.

## Requirements

- Display validation error messages under each form field.
- Use custom CSS to style the form and error messages.
- The "Save" button should be disabled until all mandatory fields are filled with valid data
- For bonus points, use Angular's Reactive Forms
