

Assignment 4 : Movies/shows list

Overview

Create a web application (Angular only, no backend) for users that want to rate movies.

The app will show you a grid of movies/shows. Each element of the grid will have some details, like a name, a picture, and a rating.

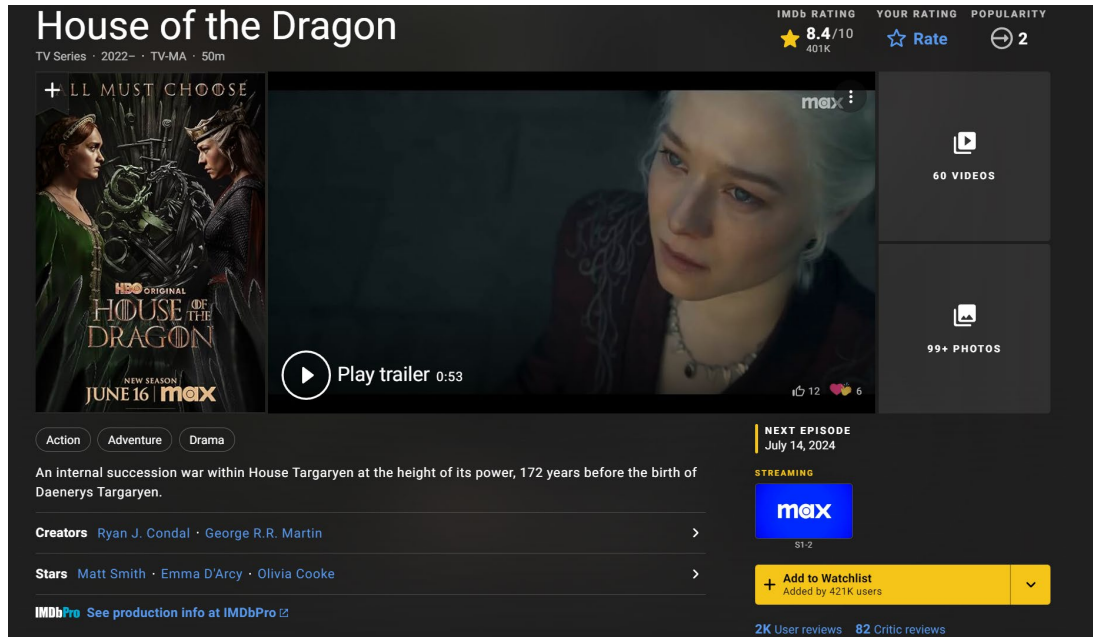

In this app you will also have the possibility to add your own movie/show directly from the UI.

Once it is added, you will be able to see it inside the grid, even after refreshing the page.

Bonus features:

1. Clicking on the show's thumbnail will redirect you to another page where you can get more information about the show. Like this example on IMDB:

2. You can rate the show, and your rating will be mathematically calculated. Those changes will be preserved when you refresh the page, and once you vote you cannot do it again for the same show.
